Without aesthetic medicine, Jennifer Lopez would not look so young. This is the first time anyone has decided to reveal what treatments the singer has undergone.

Jennifer Lopez recently celebrated her 50th birthday, but looking at her photos, it's hard to believe. Time stopped for her several years ago.

Some of the singer's fans will think that it is due to genes. Others will, however, calculate how many surgeries or aesthetic medicine she has undergone .

Plastic surgeon Julian De Silva has no doubt that J.Lo improved her beauty .

In an interview with [dailymail.com](https://www.dailymail.com), Julian De Silva paid special attention to the last few years. Jennifer Lopez's face has not changed at all , which, given her rather stressful lifestyle, is not possible. So he pointed out all the shortcomings that should appear on the face of the star over the years. Until now, however, no one has noticed at least one of these, because they simply are not there.

To confirm the words, Julian De Silva decided to do a simulation. He used the Future Face program , which predicts how the face can age over the next 20 years. Thanks to this, it is easy to imagine what J.Lo could look like at the age of 50 , if she could not afford aesthetic medicine treatments. The software examined key marker points around Jennifer's eyes, eyelids, cheekbones, wrinkles and crow's feet.

The surgeon noticed that in 1999 (photo on the left) J.Lo looked 26 years old, i.e. four years younger than she really was then. On the right side there is a photo of the singer from the simulation.
