Amber Heard, Before and After

The beauty evolution of the 'Aquaman' star.

Amber Heard has the world's most perfect face.

At least that's what [Dr. Julian De Silva](#), a London-based plastic surgeon, concluded when he analyzed the 33-year-old's features using computer mapping technology.

"The Phi ratio of 1.618 has long been thought to hold the secret for beauty," he says. After measuring Amber and other celebs across 12 key markers for the nose, lips, eyes, forehead, chin and facial symmetry and shape, he found that Amber came closest to the ancient Greek principles for physical perfection.

"[She] has the most beautiful face in the world, scoring a high 91.85 percent." Of course, a plastic surgeon more than anyone would know that the so-called "perfect" facial proportions can be achieved by going under the knife. Funnily enough, Dr. De Silva's algorithm scored [Kim Kardashian](#) a 91.39 percent, and we all know there's nothing natural about her!
